

Executive Portfolio Overview

Nov 1 - Nov 12 Performance & Analysis Report

Part 1: Strategic Actionable Insights

OPTIMIZATION (UNIT YIELDS)

Our financial yield analysis indicates that standard LU units deliver the highest baseline performance (Yield Index: 51). We recommend a strategic price adjustment for lower-performing spaces like FB1 and FB2 to bring their yield-per-square-foot in line with our high-performers, or exploring options to repurpose that physical footprint to meet the higher demand profile of LU units.

RETENTION (PROMOTION ADJUSTMENTS)

Our analysis shows that aggressive deep discounts like the **"Flash 60% off"** result in a critically low length of stay, averaging only **4.33 days**. We propose phasing this high-churn promotion out in favor of structural loyalty-based alternatives like the "Long Term 40% off" plan, which secures a significantly more stable occupancy rate (averaging 10.33 days).

VISIBILITY (REAL-TIME TRACKING)

With the current data pipeline successfully modeling granular tenant data, we can now track Net Absorption in real-time. Because our current Net Unit Movement sits exactly at 0 (flat operational momentum), we recommend implementing an automated daily "Move-In/Move-Out" alert sent directly to leadership to prevent negative absorption trends before they impact macro portfolio yields.

Part 2: Technical Case Study

The Most Challenging Obstacle: The Cross-Filtering Dead End

The most significant challenge encountered during this analysis was a complex data modeling issue involving **circular filtering and repeating grand totals** (the "848 issue").

Architecting the Solution

The root cause was a lack of a valid filter path. The promotion category (`sDiscountPlan`) resided in the transactional table, while the metrics were derived from the master dimensional table. Duplicate tenant IDs acted as a brick wall for the filter context. I overcame this by designing a custom **Star Schema**, creating a clean Bridge Table (`Dim_Tenants`) using `CALCULATETABLE` and `DISTINCT` to isolate unique tenant identifiers and purge nulls. Finally, I configured a **bi-directional cross-filter** between the bridge and the transactional fact table to unblock the data pipeline.

Appendix A: Main Dashboard View

Financial Yield by Unit Type

Unit Type	Financial Yield
LU	51
RG	38
FB2	34
FB1	33

Daily Net Absorption Flow

Day	MoveIn	MoveOut	Net Movement
1	5	0	5
2	4	1	3
3	1	0	1
4	1	0	1
5	1	0	1
6	1	0	1
7	1	0	1
8	3	1	2
9	2	1	1
10	1	0	1
11	1	0	1
12	1	0	1

Promotion Churn Risk Analysis

DiscountPlan	Avg Days Stayed	Redeemed Units
Long Term 40% off	10.33	3
Finbox 50% off	11.67	2
Flash 60% off	4.33	2
LT 40% off+Sales burn off	9.51	2
Prepay 50% off	5.00	2
30% Discount	0.00	1
2023 Red Hot -60% online	0.00	1
2024 Summer Flash -60%	11.00	1
Expo 50% off	0.00	1
Flexi 30% off	0.00	1
Flexi 30% off+Sales burn off	11.31	1
Flexi 40% off sales	0.00	1
總計	256.10	848
